

ADMT 2018 - Project

Group 02: Andreas Vieider (13177)
Laurin Stricker (13412)

December 18, 2018

1 Introduction

The domain of our fictional company is the one of furniture production and retail. The company is located in the province of Bolzano and has several showrooms in the area and one production center.

1.1 Business processes

1.1.1 CRM - Showroom visit

One CRM process is the collection of data about visitors at the different showrooms. A visitor can either be one who is just looking around without intention of buying anything (Seeleute), a future potential customer or an already existing customer. A visit can lead to an order.

Business questions:

- Which is the best running showroom (most visitors, most orders, etc.)
- Where are the customers from (with different granularity)
- Which department are the customers the most interested in
- Compare the number of visitors to the number of customers for a time period and/or showroom

1.1.2 Production

The company logs every step in the production process, especially duration, defects and machine failures.

Business questions:

- What is the average time to produce a particular product
- Which is the product with the highest/lowest error rate
- How much effort/time is spent per order
- Which orders/products generated the most machine failures

2 Conceptual Design

Table 1: Fact table

	Fact	Dimensions	Measures
Showroom visit		Date, Showroom, Visitor, Order, Detail, Department, Sales representative	
Production		Start Date, End date, Product, Production Stage, Machine, Quality control, Operator	

3 Conclusions

In conclusion, the best solution was submitted using k=15 and without de-biasing with a score of about 0.079.
